The program is executed in the following manner:

First, a hyphen (-) is set in all print positions. Then, the comment for the first operation (SKIP-TO--1-IMMEDIATE) is transferred from storage to print positions 231-250.

The "1" in the operation comment (Location 240) is then changed to "2" in preparation for the next operation to be performed. Following this an 12 and a print instructions are executed, and so on to the end of the test, at which time the program branches to begin loading the next program if Sense Switch D is OFF or repeat the test indefinitely if the switch is ON.

Checking Procedure

Visually examine the printed results for horizontal print alignment and proper skipping in accordance with punchings in the carriage tape.

NOTE: Since the Title Print operation is not under carriage control, the spacing between the Title and the first operation comment may vary from 2 to 40 spaces depending upon the position of the carriage when the Title (FORMS SKIPPING 2010A) is printed.
